

# Plant watering log

Fill in after watering. One row per event. A4 landscape print sheet.

Period: \_\_\_\_\_ Plant / zone: \_\_\_\_\_

| Date, time | Plant or zone | Volume ml / L | Reason for watering | pH / EC if measured | Feed, amount and units | Result / notes |
|------------|---------------|---------------|---------------------|---------------------|------------------------|----------------|
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |
|            |               |               |                     |                     |                        |                |

Period review: known volume \_\_\_\_\_ ml / L. Unmeasured watering events: \_\_\_\_\_

What to check or change: \_\_\_\_\_

Unknown volume: write "not measured". Include EC units. An empty row is not a reason to water.
